

Stuffing-Box-Packing Type 2124

Material composition

TEADIT style 2124 is braided in various round cross sections from 100% pure PTFE-tapes.

To further improve gas tightness, the finished braid is tightly wrapped in an additional layer of PTFE-tapes.

Please note: the colour of the actual product might vary from the image on this data-sheet.

Properties

TEADIT style 2124 is an extremely pliable and durable valve stem packing. Made of 100% pure PTFE, it has excellent chemical and thermal resistance, as well as an exceptionally low level of friction and adhesion.

Application areas

Although predominately a valve packing, style 2124 can also be used as a static seal in many different areas.

Application media

TEADIT style 2124 can be used in connection with most liquid and gaseous substances, including oxygen. Excellent all-purpose valve stem packing for many different industries.

Not suitable for

Molten alkali metals and fluorine compounds at high temperatures and pressures.

Benefits

Because of the suppleness of the pure PTFE-material, style 2124 can be installed in spiral form - this reduces installation time. When compressed, the spiral becomes a solid, impervious and extremely durable PTFE-sleeve. The low coefficient of friction facilitates easy valve stem movement.
